

5.2 Audio On/Off and Mirroring Modes

After joining a meeting, user can enable/ disable audio output on **Projection Mode** to choose **Video Playback** (enable output audio) or **Presentation** (muted, default setting).

Tablet, iPad, Android smartphone or iPhone user: No enable audio option on screen sharing via NovoConnect App because Android or iOS cannot allow any third party App to mirroring audio. However, there is two ways for output audio:

1. Use AirPlay or Google Cast. See [Presentation: Using AirPlay, Google Cast](#).
2. Use Video Streaming feature from NovoConnect App.

macOS – How to output audio

Install Soundflower on Mac computers

Soundflower is a kernel extension for MacOS, designed to create a virtual audio output device which NovoConnect Software for MacOS relies on to output audio properly. This article describes how to install Soundflower on Mac computers.

NovoConnect Software and LauncherPlus/LauncherOne Software

1. Download the installer: [soundflower_2.0b2.zip](#).
2. Unzip and double-click Soundflower.pkg to start. Follow the on-screen instructions to complete the installation.

Additional Steps for MacOS 10.13 +

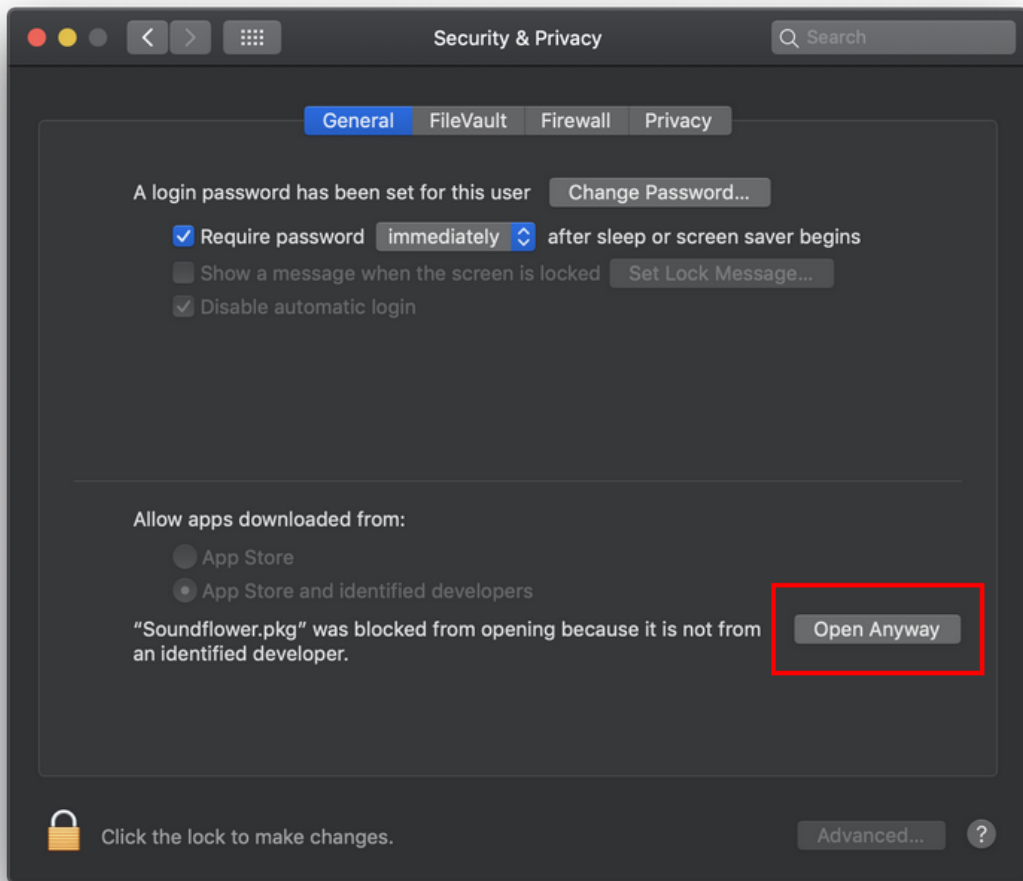

- Due to security and privacy changes introduced starting with MacOS 10.13, some additional steps are needed during and after the installation process.

Security and Unidentified Developer

- You may run into the following “unidentified developer” issue during Soundflower installation.

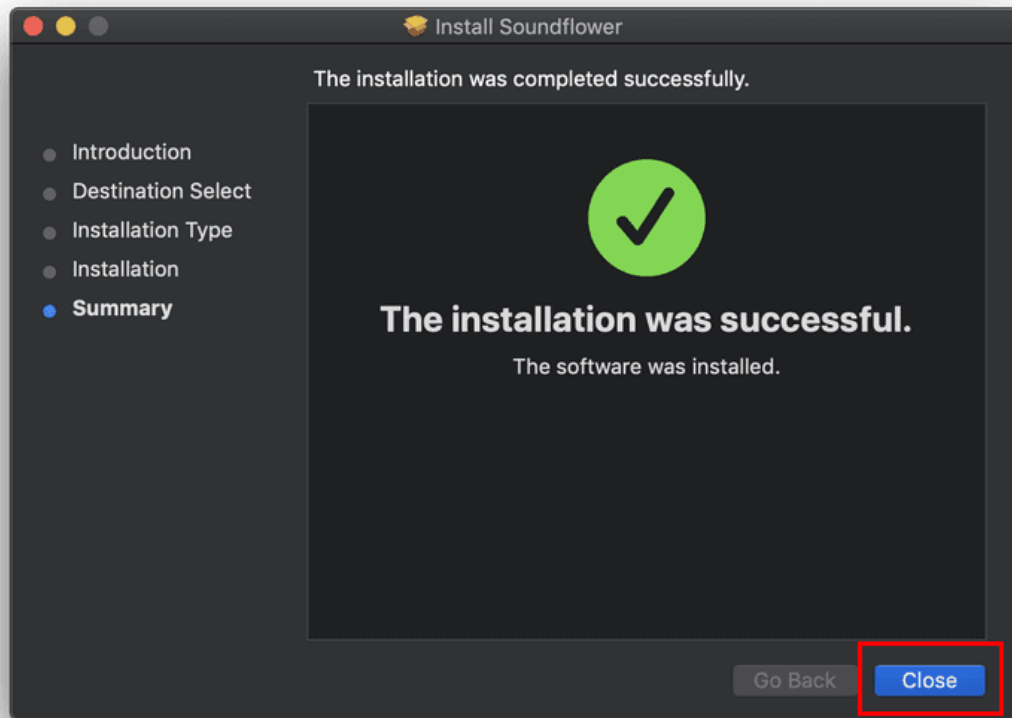

- In this case, follow these steps to enable a successful installation:
1. Open the "System Preferences" and go to "Security & Privacy". You should find "Soundflower.pkg" under tab "General". Click on "Open Anyway".

2. When the following dialog shows up, click on "Open" to continue.

3. Then, you can re-start the Soundflower installer and it should complete successfully.

4. Lastly, even though not required, it is a good practice to restart your Mac after a successful installation.

Privacy and Sound

For MacOS 10.14 +, one additional configuration is needed regarding the audio output.

1. Open the "System Preferences" and go to "Security & Privacy".

2. Click on “Privacy > Microphone” and then check “NovoConnect Software”

3. Now, your NovoConnect Software & LauncherPlus/LauncherOne software should be able to output audio.

The image shows a meeting application window. At the top, there is a search bar with a link icon and the text "Enter Meeting ID, room name or IP". Below this is a separator line with the word "or" in the center. Underneath are three tabs: "Nearby Devices" (which is selected and has a green underline), "History", and "Device Directory". The main content area below the tabs is a light gray rectangle with the text "No Devices found" centered in it. At the bottom left of the main area is a hamburger menu icon followed by the text "Preferences & Tools".

A dark gray settings panel is open at the bottom of the window. It has a gear icon and the title "Settings". The panel contains several settings:

- Projection Mode:** A radio button is selected for "Video Playback" (with a speaker icon), and "Presentation" (with a muted speaker icon) is unselected.
- Soundflower:** This setting is highlighted with a red rectangular box. It consists of the label "Soundflower" and a blue button with the text "Enabled" and a downward-pointing arrow.
- System Tray Notification:** This setting consists of the label "System Tray Notification" and a blue button with the text "Enabled" and a downward-pointing arrow.

At the bottom of the settings panel, there is a message: "You software is up-to-date." followed by a blue button labeled "Check for updates". Below this is a checked checkbox followed by the text "Never remind me again."
