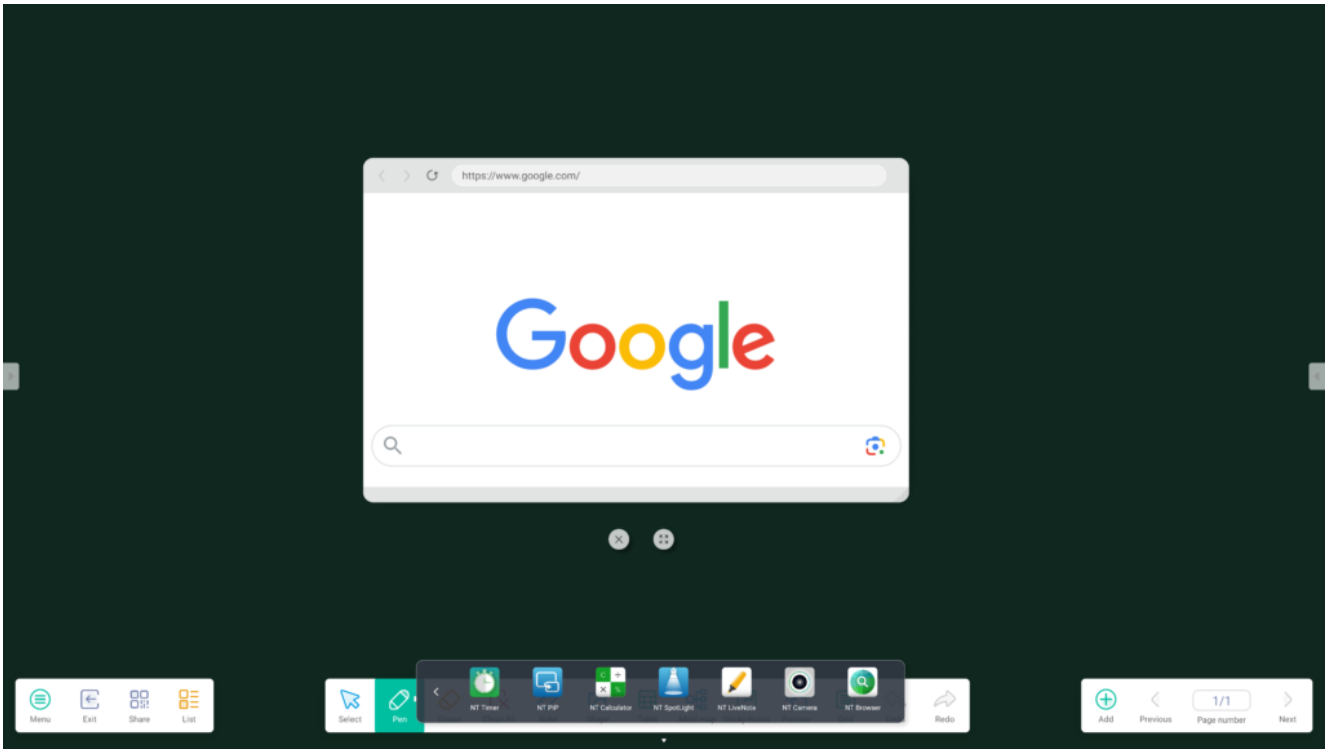
3.6 Floating Apps

Floating Apps are a series of applications, each of which runs as a (re-sizeable) window instead of the typical full-screen most Android Apps do. As a result, you can run multiple Apps at the same time to enhance collaboration experience. For example, in the following picture, a floating App, NT Browser (web browser), is running along with the whiteboard App, Note.



Running whiteboard and NT Browser at same time.

All Floating Apps share the same usage patterns.

- You can relocate and/or resize the App window by dragging.
- The “Close” and “Maximize” icons are accessible right below the App window.

The following table summarizes these Floating Apps.

Name	App Icon	Description
NT Browser		Web browser

NT Calculator		Basic calculator
NT Timer		NT Timer offers two main functionalities 1. Stopwatch 2. Countdown timer
NT Camera		Camera view (USB webcam)
NT PiP		Picture-in-picture App. You can bring in video sources such as HMDI Inputs, USB-C, and VGA. Key features include 1. Select signal source 2. Resize App window 3. Relocate App window 4. Enable/disable Touchback
NT LiveNote		A tool palette consisting of on-screen annotation and screen-share control. It is overlaid on top of any Apps and therefore users can annotate anything on the screen. Please refer to Section 5.5 for details
NT Spotlight		Spotlight app (to draw users' attention)
NT Player		Video player supporting a variety of video formats, including mp4, mov, avi, etc.
