3.9.1 Whiteboard – Simultaneous Collaboration with Dual Colors

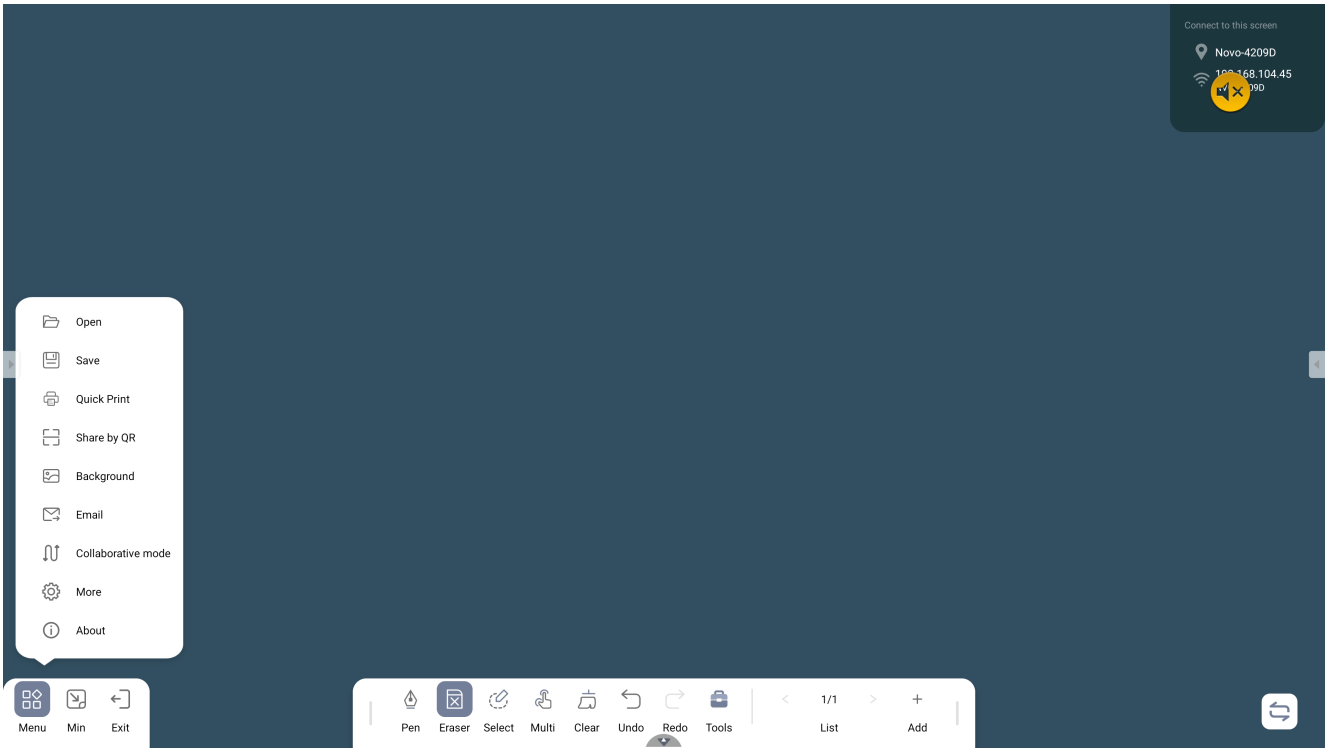

The NovoTouch device supports simultaneous writing for two users with dual colors. This function can be enabled or disabled according to the user's needs. Please follow the instructions below to configure this setting.

Enable/Disable Simultaneous Writing with Dual Color

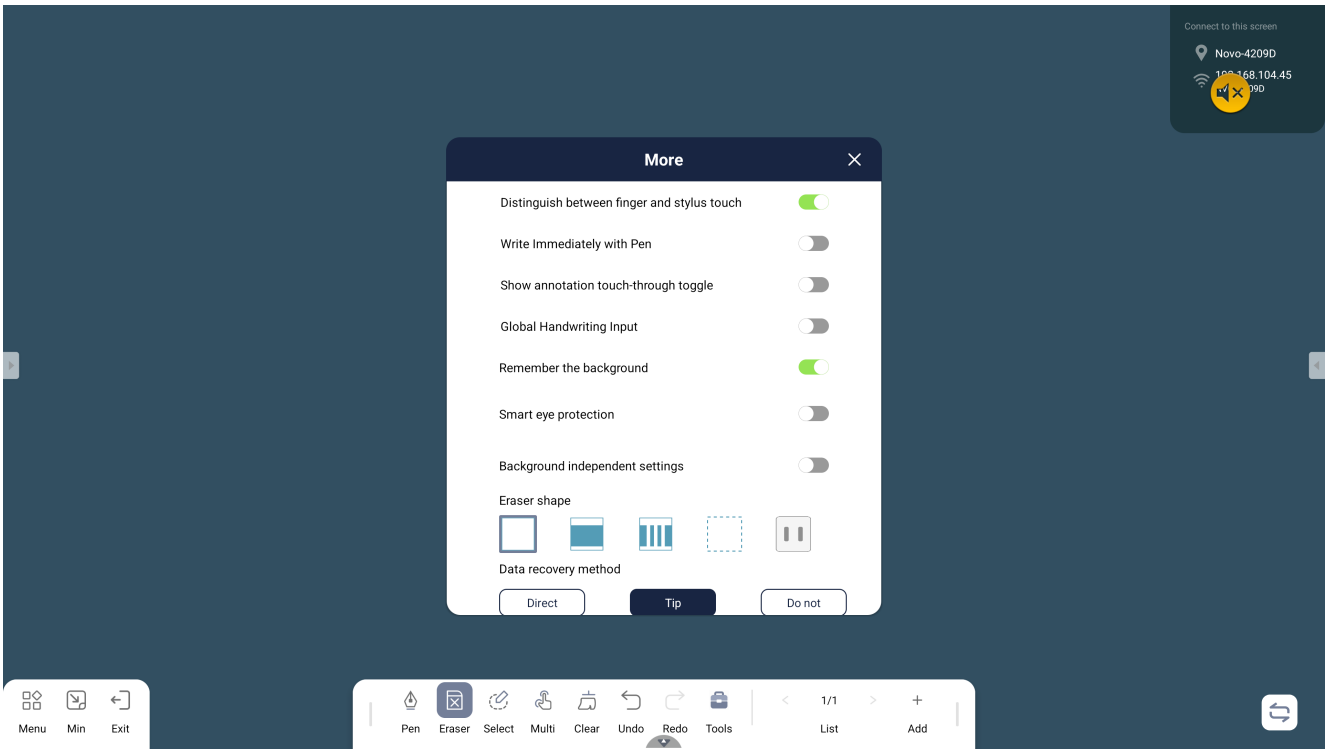

- On the **Whiteboard** app, click the **menu** in the bottom left corner.

- Click the **More** button from the function list.

- Under the **More** section, the first item, **Distinguish between finger and stylus touch**, is used to enable or disable simultaneous writing with dual colors. The setting is **enabled** by default. To change this, simply click the **toggle**.

- When the **Distinguish between finger and stylus touch** function is **disabled**, if two users write with two

styluses, both styluses will write or draw in the same color.
