RemoteManager_DB-Server Release Notes

V1.1.0

New Features

- Separate DB Server into a service daemon and a UI component. (The service keeps on running even if the UI component is closed by users.)
- Add option to enable/disable auto-run of this program after computer reboot.

Improvements

- Backward compatible with device database created with previous versions of the DB Server

Bug Fixes

- Fixed the issue of "DB failure during importing large number of device records (over 1500 records)"
- Fixed the issue of "program crash when synchronizing large number of device records (over 1000 records) between DB Server and Remote Manager"
