

What is NovoStage

NovoStage software will turn any Windows device into a collaboration platform that allows multiple screens presenting to the main display. It is ideal for information sharing and creates a collaborative meeting environment by combining video conferencing and content from Windows computers, tablets or smartphones. NovoStage is an agnostic platform that provides support for all operating systems and facilitates a full BYOD!

A typical application scenario is to install NovoStage software on the OPS Windows module of a NovoTouch panel, which is transformed into a wireless collaboration platform, where users can share their screen wirelessly, join a video conference call, and run any Windows applications at the same time.
